

"Like winds and sunsets, wild things were taken for granted until progress began to do away with them."

—Aldo Leopold (1887-1948), Sand Country Almanac, 1949.

OTSEGO COUNTY RECYCLING

A comprehensive guide of
what and where to recycle

This resource is made possible by:

Otsego
COUNTY
MICHIGAN

ABOUT THIS GUIDE

The purpose of the Otsego County Recycling Guide is to provide resources and information to the residents of Otsego County to help manage solid waste through reduction, reuse, and recycling. It is made possible through the Otsego County Recycling Millage and the Otsego Conservation District.

For more information about recycling and household hazardous waste disposal please visit www.otsego.cd.org/recycling.html

or contact the Otsego Conservation District office at (989) 732-4021

The Three Rs: Reduce, Reuse, Recycle

REDUCE: Produce less trash overall. Try reusable food containers instead of plastic bags. Use dishcloths or hand towels instead of paper towel. Avoid single-use products. Choose products with less packaging, or packaging that can be recycled.

REUSE: Find new ways to reuse items. Be creative! Plastic grocery bags make great household trash bags. Cut up old bedding or t-shirts to use as rags for cleaning. Donate gently used clothing and household items to a resale store.

RECYCLE: Drop off your clean, recyclable items at one of five convenient sites in Otsego County! Recycled items are collected and sorted, then processed to make new materials. Look for the “post-consumer recycled content” label to see if products you buy are made from recycled materials.

Recycle Smart, Do It Right!

Manufacturers want access to recycled materials, but aren't able to use the materials if people don't recycle right. Anything going in the recycling bin must be **CLEAN** and **DRY**.

Otsego County's Recycling Drop-off Program

Single-stream recycling: everything goes in the same bin!

Recycle these items and remember to clean them first:

- Aerosol cans - must be empty
- Aseptic cartons - packaging for liquids foods like soup
- Metal & Aluminum - cans, foils, trays
- Cardboard, flattened and dry
- Cartons - milk, juice, soy, drink boxes.
- Freezer paperboard - ice cream and frozen food containers
- Glass containers - all colors
- Scrap metal - must fit in container
- Pizza boxes - cut out greasy parts
- Paper - newspaper, office paper, magazines, books, phone books, brown paper bags, books
- Plastic containers - all types, even unmarked, clamshell containers
- Garden plastics, baskets, pails, buckets. Break down to fit in the bins.
- Plastic Film - grocery and bread bags, kitchen shrink wrap, Visqueen.
- Styrofoam - egg cartons, packaging
- Marine shrink wrap
- Bubble wrap & air pillow packing materials

Recycling Bin Drop-off Locations

1. **Otsego Recycling West:** 71 Hayes Tower Road, Gaylord, 550 feet south of the M-32 and Hayes Tower Road intersection, just south of Hayes Township Hall
2. **Otsego Recycling North:** 621 Garfield Street, Vanderbilt, Northeast of the Vanderbilt Village Hall and the intersection of Garfield and Elm Street
3. **Otsego Recycling Central:** 931 S. Otsego Avenue, Gaylord, near Merchandise Outlet and Jay's Sporting Goods
4. **Otsego Recycling South:** 247 Old State Road, Gaylord across from the Otsego Lake Township Cemetery, half-mile east of the intersection of Old 27 South and Old State Road
5. **Otsego Recycling East:** 2932 Rock Road, Johannesburg, at the Charlton-Chester-Dover Transfer Station near the corner of M-32 East and Rock Road

Items are accepted 24/7.

For a map showing bin locations, see inside back cover of this guide.

Items that cannot be recycled at drop-off

Some items are dangerous to transport or handle.

Remember, real people sort your recycling!

- Batteries of all types
- CDs and DVDs
- Chain, hoses, rope, wire and tarps can shut down the entire sorting facility after wrapping around and clogging the metering machine
- Carpet, or carpet padding/foam
- Diapers, dirty or clean
- Fluids are not accepted at any time
- Furniture
- Styrofoam packing peanuts
- Glass windows, mirrors, cooking pans and TV/computer monitor glass
- Light bulbs, fluorescent, tubes, CFLs, LEDs or any type of lightbulb
- Hazardous waste and solvents
- Medications
- Paint, latex and oil paints and stains
- Sharps
- Dishes

Wishful Recycling: *When in doubt, throw it out.*

Wishful recycling or tossing items in the recycling bin that you hope are recyclable or think should be, could be contaminating inbound streams of recyclable materials and causing tons (literally, tons) of recycled items to be sent to landfills instead of being recycled. It truly does more harm than good.

**Not sure if
it's recyclable?**

OTSEGO COUNTY

HOUSEHOLD HAZARDOUS WASTE DISPOSAL DAY

Program made possible by Otsego County Recycling Millage

ACCEPTED ITEMS:

- Adhesives
- Aerosol cans
- Propane cylinders
- Fire extinguishers
- Smoke detectors
- Batteries
- Ammonia
- Antifreeze
- Fertilizers
- Herbicides & pesticides
- Oil-based paints & stains
- Paint thinners
- Wood strippers
- Household cleaners & solvents
- Household/automotive lubricants
- Motor oil and gasoline
- Pool & spa chemicals
- Medications, vitamins, supplements
- Sharps (in sealed hard container)
- Lightbulbs & fluorescent tubes
- Transmission/brake fluids
- Nail polish, nail polish remover
- Mercury, thermometers
- PCB-containing lamp ballasts
- Asbestos-contaminated materials
- Inks & printer cartridges

Saturday, July 11 , 2026

9AM to 2PM

Otsego County Road Commission

669 W. McCoy Rd

Gaylord, MI 49735

FREE For Otsego County Residents
& Landowners

NOT ACCEPTED:

- Latex paint (see page 5)
- Tires
- Weapons, ammunition
- Asphalt or shingles
- Radioactive waste
- Insulation cylinders
- Building materials
- Construction debris
- General trash

OTSEGO COUNTY

HOUSEHOLD HAZARDOUS WASTE DISPOSAL DAY

Program made possible by Otsego County Recycling Millage

Hazardous Waste Disposal for Businesses - \$50 plus \$1/pound

We can collect hazardous waste from businesses that meet the definition of a Very Small Quantity Generator (VSQG) of hazardous waste:

- Produce less than 220 pounds of hazardous waste per month
- Never accumulate more than 2,220 pounds of hazardous waste at a time

Materials will be accepted Saturday, July 11 , 2026 by appointment only.

Please call (989)732-4021 by July 3, 2026 to schedule an appointment.

How to Dispose of Latex Paint

Latex paint is less toxic than oil-based paint, and is water-soluble, so it's okay to rinse brushes and wash your hands at the sink, but don't pour paint down the drain. Instead, try these options:

- Recycle it: take it to the Emmet County Recycling Drop-off Center
- Dry it up: add kitty litter, sawdust, or shredded paper to the paint can and stir until all the liquid is absorbed. After it dries, throw the paint can (with lid off) away with your regular garbage.
- Donate it: ask friends or neighbors if they need paint for a small project. Local schools, art, and theatre groups sometimes need free paint for projects and sets.
- Store it: save leftover paint for future touch-ups. Wipe excess paint off the rim, and place a piece of plastic wrap between the lid and the rim to ensure an airtight seal. Store in a cool, dry place, off the floor.

For more information on Household Hazardous Waste Disposal Day, please contact

Otsego Conservation District

Phone: (989) 732-4021

800 Livingston Blvd., Ste. 4A, Gaylord, MI 49735

OTSEGO CONSERVATION DISTRICT
**ELECTRONICS RECYCLING
PROGRAM**

Program made possible through the EGLE Rural Electronic Recycling grant.

ACCEPTED:

- TVs, monitors, computer towers
- desktop printers, laptops, tablets
- cell phones, radios, microwaves -
cables/cords/wires
- CD/DVD players
- vacuums, hair dryers
- curling irons, heating pads
- toasters
- other household electronics

NOT ACCEPTED:

- large appliances like washers,
dryers, refrigerators
- dishwashers
- dehumidifiers
- humidifiers
- air conditioners
- anything with freon
- Large office copiers (call for
special instructions)

ELECTRONICS RECYCLING - \$0.75 per lb.

The electronic recycling collection facility will be open:

The first **Thursday** of every month from

4:00PM-5:00PM by appointment

The third **Monday** of every month from

9:00AM-11:00AM

*Business/organizations with large quantities should call to
discuss pick up options.

459 Livingston Blvd Gaylord, Mi 49735

Natural Home Remedies:

Less Toxic Alternatives to Common Household Cleaners

Many brand-name cleaners used in households today contain toxic or hazardous chemicals. There are less toxic alternatives that can be used. These solutions are typically more cost-effective.

PURPOSE	LESS TOXIC ALTERNATIVE
All-purpose cleaner	Mix 1/2 cup vinegar + 1/4 cup baking soda (or 2 teaspoons borax) into 1/2 gallon of water
Bathroom mold	Mix one part hydrogen peroxide with 2 parts water in spray bottle; wait 1 hour before rinsing
Bleach	Borax
Car battery corrosion	Baking soda and water
Carpet stains	Club soda
Coffee and tea stains	Moist salt; for coffee makers add 2 cups water and 1/4 cup vinegar and bring to a boil, rinse with water and wipe clean
Dishwasher soap	Mix equal parts of borax and washing soda
Disinfectant	Mix 2 teaspoons borax, 4 tablespoons vinegar and 3 cups hot water
Drain cleaner	1/2 cup baking soda down drain and add 1/2 cup vinegar wait 15 minutes and flush with warm water
Fertilizer	Compost and vermicomposting
Furniture polish	1 tablespoon lemon oil in 1 pint mineral oil
Garbage disposal	Ground lemon
Grease removal	Borax on damp cloth
Ink spot remover	Cold water and 1 tablespoon cream of tartar and 1 tablespoon lemon
Laundry detergent	Mix 1 cup Ivory soap, 1/2 cup washing soda and 1/2 cup borax. Use 1 Tbsp. for light loads; 2 Tbsp. for heavy loads. For small spills on the garage floor, add baking soda and scrub with wet brush
Oil and grease spots	2 tablespoons liquid soap and 2 tablespoons borax and warm water
Oven cleaner	water
Pet odor remover	Cider vinegar
Rust removal	Lemon juice, salt and sunlight
Window cleaner	Mix 2 teaspoons of white vinegar with 1 liter warm water

Please visit this website for more tips and alternatives:
<https://learn.eartheasy.com/guides/non-toxic-home-cleaning/>

CONSTRUCTION MATERIALS

American Waste/GFL Environmental Address: 10164 M-32, Elmira, MI 49730 Phone: (231) 547-2162 Items: All except brick and block, \$41/cubic yard Call ahead for information on drop-off times, fees, and additional details.

FERTILIZER, PESTICIDES, HAZARDOUS WASTE

County of Otsego Household Hazardous Waste Disposal Day

For information on dates and accepted items see page 4 of this guide, or contact the Otsego Conservation District.

Website: www.otsegocd.org

Phone: (989) 732-4021 (Otsego Conservation District)

Fertilize Smart

You probably know that fertilizer allows for a lush green lawn but you may be unaware of how it impacts local watersheds. One of the most problematic water pollutants in Michigan is phosphorus. Phosphorus is a nutrient found in most lawn and garden fertilizers.

What is the issue with phosphorus?

Phosphorus occurs naturally. It becomes a pollutant when human sources add an excess amount to the environment. When fertilizers run off lawns during a rain, the phosphorus is added to surrounding lakes and streams. Excess nutrients in lakes can cause algal blooms

which are harmful to aquatic life and humans. Algal blooms are unsightly, often have an unattractive odor, cause fish kills, disruption of lake ecosystem dynamics, and can be harmful to humans. Groundwater pollution is also a concern with fertilizers.

Healthy Lawn Tips

You can still have a green lawn without harming nearby water bodies. These steps can help:

Fertilize

- Use phosphorus-free fertilizers – Most Michigan lawns only need nitrogen as they have enough phosphorus
- Apply once a year – Early fall is best
- Clean up fertilizer on sidewalks and driveways
- Don't fertilize before a heavy rain

Look for the Middle Number

- Fertilizer bags have N-P-K nutrient analysis
- The middle number (P) is the Phosphorus content
- A "0" indicates Phosphorus free

Soil Test

- It is helpful to know the soil on your property including the nutrient content, pH level and organic content to better understand what your lawn needs.

MATTRESSES, BOX SPRINGS & FUTONS Continued

Emmet County Recycling Drop-off Center

Address: 7363 Pleasantview Rd., Harbor Springs, MI

Phone: (231) 348-0640

Website: www.emmetcounty.org/recyclingguide/

Items: Mattresses, springs and futons. Twin/single or smaller \$20 per piece; Two-piece king box spring \$20 per piece; double/queen/king \$26 per piece. Prices may change see website or call for information.

Fast Facts about Mattresses!

- When a mattress is recycled, it is cut open and the layers are separated and organized by type. Metal springs, wood framing, and foam can all be collected and reused in manufacturing.
- More than 75% of a traditional mattress can be recycled into other products, diverting valuable resources from landfills.
- In the United States, more than 50,000 mattresses are discarded every day.
- According to manufacturers, the average lifespan of a mattress is 7 to 10 years. This varies depending on the type of mattress (innerspring, latex, memory foam) and how often it's used. If your mattress is excessively dirty, sagging, or you wake up in pain, it may be time for a replacement.

MEDICATIONS

Gaylord City Police Department at City Hall

Address: 305 E. Main Street, Gaylord, MI 49735

Phone: (989) 732-4060

Notes : Prescription medications and drugs can be dropped off at the City Police Lobby M-F from 8am –4pm. **No liquids or sharps.**

Otsego County Sheriff's Department, Drug Disposal Program

Address: 124 South Court Street, Gaylord, MI 49735

Phone: (989) 732-7555

Note: Prescription medications and drugs can be dropped off at the Otsego County Sheriff's Department office. **No sharps or liquids.**

A Remedy for Residential Drug Disposal

Properly disposing of unused medications ensures safety and environmental health. In the past, flushing medications down the toilet was the accepted method of disposal. This method works for disposing of drugs in order to keep them from being misused but has negative consequences for our water systems. Wastewater treatment plants are able to screen out a large number of contaminants, but many medications are unable to be filtered out. This means many medications are ending up in our streams and aquatic ecosystems.

In 2000, the U.S. Geological Survey collected water samples from 139 streams in 30 states and identified both organic wastewater contaminants and pharmaceuticals in 80% of the sampled sites.

The topic of pharmaceuticals and personal care products (PPCPs) in our water has gained national attention and poses a threat to human and environmental health. PPCPs are a broad group of compounds consisting of human and veterinary medicine and consumer products such as fragrances, sunscreens, lotions, cosmetics and house cleaning products. Scientific studies have shown negative health implications for a number of aquatic organisms. The small dose of exposure for humans does not pose immediate concern for human health, but it is important to take steps now to prevent this threat.

DON'T FLUSH

**There are safer alternatives for disposing of medications!
See page 20 for local disposal options.**

SHARPS

Drop-Off event every second Saturday/month 9-1 at circle drive.

Preventing Hazardous Mercury Spills

Products containing mercury should be replaced with safer alternatives to avoid exposure and contamination. Mercury is used in many items such as thermometers, barometer, switches, thermostats and fluorescent lamps. These items often have mercury-free or lower-mercury alternatives.

Although it is legal to throw these items in the trash, it is highly recommended that you dispose of them at household hazardous waste collection sites. At high levels, mercury can cause damage to the nervous system and cause convulsions, tremors and inability to walk. Landfills have the ability to leach contaminants into groundwater, so reducing the amount of toxins we place in our waste stream can only help reduce the risk of

MOTOR OIL Continued

Item: Motor oil, brake fluid, automatic transmission fluid, diesel fuel, hydraulic fluid, and lube oils. Note: NO gasoline, gasoline/oil mix, stroke oil, fuel oil, water, transformer oil, or Blue DEF fluid.
For pricing check website or call.

Tractor Supply

Address: 1286 S. Otsego Avenue, Gaylord, MI 49735

Phone: (989) 705-1256

Items: Motor oil only up to 5 gallons.

Oil is a serious pollutant--Recycle Used Motor Oil! An estimated 11 million gallons of used oil are dumped per year in Michigan

When used motor oil is dumped down sewers, in empty lots, in holes in the ground, on weeds or in landfills, the result is toxic. Used motor oil contains toxic substances (including lead) produced during engine use. Dumping oil contaminates ground and surface waters therefore impacting aquatic ecosystems and human health.

- One quart of oil will foul the taste of 250, 000 gallons of water.
- Oil kills small organisms floating on the water's surface. A lack of these organisms also causes those higher up on the food chain to be killed.
- One pint of oil can create an acre-sized slick on surface water.
- Used motor oil and other auto fluids as hazardous waste and require proper disposal by law.
- Every gallon of used motor oil that is improperly discarded can contaminate 1 million gallons of drinking water, according to the EPA.
- Motor oil also never wears out, but rather gets dirty, so it is often recycled and resold.

PROPANE TANKS continued

East Jordan Auto Parts

Address: 7399 Fair Rd, East Jordan, MI 49727

Phone: (231) 536-2322

Website: www.ejautoparts.com

Note: May bring propane tanks in with valves on and no hole puncture.

Disposal of Propane Tanks

Propane gas. You can use it to heat your house, grill up a weekend barbeque, or light a camp stove. Like a lot of other items in and around our homes, propane tanks require special care when it's time to dispose of them.

The Problem: Propane gas is compressed into liquid form and housed in tanks of various sizes. Propane grill tanks weighing 20 pounds are the most common size. You've seen them stacked around someone's outdoor grill—perhaps your own. At some point, those tanks will need to be disposed of responsibly.

Propane tank disposal presents one problem. There may be flammable gas left inside an "empty" tank. That leftover gas renders propane tanks hazardous. Hazardous waste is defined by the EPA as "leftover household products that can catch fire, react, or explode under certain circumstances."

This means you cannot throw your tanks in the trash (or recycling bin) when you are through with them. Doing so could harm the people collecting your trash.

Options for disposal:

- Propane Tanks Are Designed for Reuse. Propane grill tanks were designed from the get-go to be refillable. This is how it works for a propane grill tank.
- Buy a propane tank filled with gas from your local hardware, grocery, or drug store. The cost will include a deposit on the tank.
- When your tank appears empty, disconnect it from your grill. (Be sure the gas is shut off.)
- Bring the tank (remember it's not fully emptied so use caution) to a retailer that accepts returns. Many retailers will accept any brand of propane tank for reuse or recycling when you purchase one of theirs.
- When you present your old tank, the deposit will be deducted from the purchase of a new tank.
- You may not even have to exchange your tank. Hardware stores often refill tanks on the premises. Be aware that tanks need to be in reasonably good shape — without a lot of rust or dents — to be eligible for a refill. That's a closed-loop system, as long as your tanks stay in good shape.
- There are also places that will accept propane tanks as scrap metal. Some places may require you to drill a hole in the tank and remove the valve.

What is Radon?

Radon is a gas released by the breakdown of naturally occurring radioactive elements, such as radium and uranium, in soil and rocks. It is colorless and odorless, which makes it impossible to detect without testing. When radium disintegrates in soils it emits radioactive gas that comes through to the surface. Outdoors radon is able to become diluted so it poses little health risk compared to inside a building. Radon can accumulate to high and dangerous levels.

How does radon enter your home?

Radon enters through gaps in suspended floors and around pipes, cracks in floors and walls, construction joints, cavities inside walls and the water supply.

How is radon a health risk?

Long term exposure to elevated radon levels increases risks of lung cancer. Radon is responsible for an estimated 21,000 lung cancer deaths per year according to the Environmental Protection Agency.

Radon is the second leading cause of lung cancer in the United States

To determine if radon exists in your home contact the local health department or other environmental services in your area for testing procedures.

RADON TESTING

Health Department of Northwest Michigan /Environmental Health

Gaylord Office: 95 Livingston Blvd., Gaylord, MI 49735

Phone: (989) 732-1794

Item: Radon test kit \$15.00 except in January during National Radon Action Month.

Phone: (989) 732-4021 (Otsego Conservation District)

Fast Facts about Transmission Fluid

Transmission fluid contains components that can be harmful if ingested and detrimental to the environment such as toxic heavy metals and lead. It requires intentional disposal methods to protect your health and ecosystems.

The Environmental Protection Agency considers transmission fluid (along with motor oil, brake fluid and power steering fluid) waste oil products. All can be recycled into new fluids, or burned to generate energy (which is not really recycling, but is certainly better than dumping it in a landfill).

1. Find a local automotive fluid collection site. Some local waste facilities will accept your used transmission fluid along with other automotive fluids. Check your local government offices to find a household hazardous-waste accepting location near you. Or, see if your local auto parts store will take the fluid from you — most will do so for free because they can make money off what they sell to recycling centers.
2. Drop off old transmission fluid for disposal. There are few waste management groups that will come and pick up old transmission fluid, so you will most likely need to take it in yourself. For safe conveyance, double-check the seal on your storage container to make sure it won't spill in your car or whatever mode of transportation you use.

YARD WASTE & COMPOST

City of Gaylord Address: Gaylord DPW Yard, 102 E. 7th Street, Gaylord, MI 49735 Phone: (989) 732-5475 Items: Leaves, weeds, grass clippings and biodegradable bags and Christmas Trees. Note: City of Gaylord, Bagley Township, and Livingston Township residents only. Material can be dropped off seven days a week in the spring, summer and fall. Composted material can also be picked up at no charge for City of Gaylord, Bagley and Livingston Township residents.

HOME COMPOSTING

What is Composting? Composting is nature's process of recycling decomposed organic materials into a rich, dark brown, crumbly soil known as compost. Anything that was once living will decompose. Basically, backyard composting is an acceleration of the same process nature uses. By composting your organic waste you are returning nutrients back into the soil.

10 Important Reasons To Compost:

1. Yard and food waste make up 30% of the waste stream. Composting helps divert that waste from landfills, waterways and water treatment facilities.
2. Significantly reduce pest problems and use of pesticides.
3. Healthy plants from healthy soil look better, produce better and have a much greater ability to fight off pests and diseases.
4. Adding organic materials to the soil improves moisture retention.
5. Adding decomposed organic material to soil feeds beneficial organisms.
6. Compost amends both sandy and clay soils.
7. Compost provides a balanced, slow-release source of nutrients that helps the soil hold nutrients long enough for plants to use them.
8. Composting saves money. Avoid the cost of buying soil conditioners etc.
9. Feeding your plants well will improve your own diet. Plants grown in depleted soils have reduced nutrient content.
10. Composting is a valuable tool to educate kids about nature & lifecycles.

Protect yourself and your loved ones from fire and carbon monoxide poisoning in the home with these tips

Carbon monoxide is a colorless, odorless gas produced from burning fossil fuels and is poisonous and can be fatal. Gas appliances like furnaces, water heaters, dryers, and stoves can malfunction and leak carbon monoxide into your home. That's why it's important to have carbon monoxide detectors alert you to high levels of carbon monoxide in the home.

- Like smoke alarms, test monthly and change the batteries yearly.
- **NEVER** use a gas stove to heat your home
- **NEVER** use a portable camp stove or generator indoors

BE SMOKE ALARM SMART!

According to the National Fire Protection Association, 3 out of 5 fire deaths happen in homes without working smoke alarms.

- Install smoke alarms on every level of your home, inside bedrooms, and outside sleeping areas on the ceiling or high on the wall.
- Test smoke alarms once a month and change the batteries once a year.
- Consider alarms with strobe lights or bed shakers for those that are deaf or hard of hearing. Combination smoke/carbon monoxide alarms are available, as are alarms that send alerts to your cell phone or emergency services.

Never, Ever Put These Things in Recycling Bins

- ☐ Sewing needles
- ☐ Food or food soiled paper
- ☐ Furniture
- ☐ Egg shells
- ☐ Propane tanks or cylinders
- ☐ Aerosol cans that are not empty
- ☐ Any type of battery
- ☐ Dirty diapers or any type of personal hygiene items
- ☐ Syringes, broken glass, any light bulbs
- ☐ Carpet or carpet padding/foam
- ☐ Clothing and shoes
- ☐ Bowling balls
- ☐ Garden hoses
- ☐ Electronics
- ☐ Wire
- ☐ Wrapping paper, especially flocked or foil
- ☐ Paint
- ☐ Engine oil
- ☐ Transmission oil
- ☐ Barometers or thermometers
- ☐ Any hazardous waste

Recycling is truly beneficial for the environment

EPAdata shows that recycling conserves energy and natural resources. For example:

- ☐ Recycling one ton of office paper can save the energy equivalent of consuming 322 gallons of gasoline.

Recycling just one ton of aluminum cans conserves more than 152 million Btu, the equivalent of 1,024 gallons of gasoline or 21 barrels of oil consumed.

Plastic bottles are the most recycled plastic product in the United States as of 2015, according to our most recent report. Recycling just 10 plastic bottles saves enough energy to power a laptop for more than 25 hours.

The most effective way to reduce waste, and the most environmentally preferred strategy, is to not create it in the first place. Remember the 3 Rs: Reduce, Reuse, Recycle, to help keep Michigan beautiful for future generations.

My Recycling Notes:
